DETAILED ACTION

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-10 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-16 of U.S. Patent No. 6,524,451 B1. Although the conflicting claims are not identical, they are not patentably distinct from each other because the claims of the patent when

Art Unit: 1753

read in light of the specification clearly encompass and render obvious the instant invention.

The prior patented device does not disclose the source of power to provide a voltage to each of the separate surfaces to individually control the rate of groove formation in each of the journal and conical bearings. The patent does disclose that use of a source of electrical potential and a control for controlling the duration and level of current applied to the work piece and cathode (claims 7-8 and 14-15).

The invention as a whole would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the disclosure of the patented claim, because the claims of the patent would lead the artisan to provide the presently recited control for both the journal and conical bearings and electrodes (claim 3 and 13).
